

## MMAqua H-Nozzle

MMAqua H-Nozzle is an efficient, non-clogging nozzle designed specifically for all counter flow cooling tower applications. This design provides excellent flow characteristics and a very uniform spray pattern, enhancing the cooling tower thermal performance. H-Zozzle is available in 7 different orifices to meet varied design demand of water flow. Colour coding system allows for easy identification of the correct orifice size, from 0.75" to 1.5". 2" collar of the nozzle is fixed using nut and bolts to make it fool proof fastening to the branch distribution pipes. Threads between to nozzle to collar facilitate smooth removal during cleaning and maintenance operation. Nozzle performs best between pressure ranges of 1 to 1.5 PSI
